

Level: natas11 → natas12

- **Objective:**
Modify an encrypted cookie to bypass authentication.
- **Vulnerability/Concept Exploited:**
Weak encryption (XOR cipher).
- **Tools/Techniques Used:**
Cookie decoding/encoding, XOR cipher understanding.
- **Steps Taken:**
 1. Cookie had an encoded JSON like {"showpassword":"no","bgcolor":"#ffffff"}.
 2. XOR-ed the cookie using the key provided (or reversed it).
 3. Modified showpassword to "yes", re-encoded it.
 4. Replaced the cookie and reloaded the page to get the password.
